

Updating Washington's Climate Pollution Emissions Limits

What do we need to fix?

Washington State's current emissions reduction targets do not reflect current science.

What will we do?

Governor's request legislation seeks to establish limits that:

- Are science-based targets for reducing greenhouse gas emissions;
- Recognize the role of our state's natural and working lands to draw down existing carbon pollution; and
- Establish a comprehensive inventory of Washington's climate pollution, including emissions generated from consumption.
